

JORGE CASTILLO

Senior Android Dev

ABOUT ME

My work experience has led me to feel real passion for native app development for smartphones and tablets.

I focus on "**Clean**" arquitecture and "**Clean code**", respecting "**SOLID**" principles to get the most reusable code possible.

To create "**Rock Solid**" code is mandatory for me.

I am 29.

CURRENT JOB

Senior Android developer at **From The Bench Games**. Part of "**Team Engine**", where i have the chance to work on all the football products, and to provide brand new features to more than a million users.

EXPERIENCE

ANDROID

From The Bench Games, Spain 16 Jun 2014 - Current

Droiders Feb 2013 - Jun 2014

Personal projects 2011 - Current

I started 4 years ago, when i got the chance to get my first device. I have been self teaching since then, as i really like to discover new tools and create complete new projects / user experiences. Feel free to check my github profile to know more about my personal projects: jorgecastilloprz.github.io. I have created some Android libraries, even a Java annotation processor which autogenerates needed classes for managing background tasks just by using annotations.

Later on, i got the chance to work in a dynamic consultancy (Droiders) where i developed many apps for Android **smartphones / tablets, Google Glass, and Android Wear** (first wear devices). See portfolio on next page for detailed info about some projects.

At last, From The Bench gave me the opportunity to be an important part of game development with millions of users. Working with them, i have got the chance to create products like **Fantasy Manager Football 2015, NBA General Manager 2015, or Baseball General Manager**.

Official versions of Fantasy Manager 2015 for the very important european football clubs like **Real Madrid, Borussia Dormund, Liverpool, Chelsea, or Manchester City** were a main part of my job too.

We publish new versions for all the games so often, and we try to give the best UX possible by listening carefully to users feedback.

I have advanced experience on **OOP Design Patterns** and an extense knowledge on software arquitecture (Clean arquitecture, Hexagonal, arquitecture patterns like MVP, MVC, MVVM).

WEB

Department of International Relations, University of Murcia

2011 - 2012

Long time ago, i had the chance to work as a web developer for the University of Murcia. **Operum website** was my main job. I spent some of my free time developing gaming websites, and i got pretty nice experience on PHP + Mysql + CSS + Javascript + Apache + Nginx.

Currently i have an advanced experience on creating REST services for satisfying the needs of my frontend mobile applications. I use **Silex** mainly for that, and **Capistrano** for automatic deployment.

ADDITIONAL EXPERIENCE

GRAPHIC DESIGN

Photoshop - medium level. I use it so often. I did it for editing this CV. I use it frequently to design some of my application project mockups, or create needed icons for different screen densities. I think we could call it as an "advanced developer design knowledge".

EDUCATION

TECH. ENGINEERING IN COMPUTER SYSTEMS

Public University of Murcia

I had the chance to learn pretty interesting subjects when i was studying at university. I got a **computer graphics intensification**, which means passing some aditional subjects about 3D graphics and math operations used for them.

But **Algorithms and Data Structures** was totally my favourite subject.

BACHELOR OF SCIENCE

Maristas high school

When i was younger i wanted to be an architect. That is the main reason for me to choose the science branch. Then i discovered computers and development, which is pretty much like building stuff too!

ECONDARY EDUCATION (E.S.O.)

Maristas school

Since i was a kid i studied in Maristas school. The level was always pretty high, but i cannot blame them for that as i think the professional world is pretty competitive too.

PORTFOLIO

From The Bench Games

Currently i am an important part of creating brand new features for all the Fantasy Manager Football 2015 published versions. I am working too in projects like NBA General Manager 2015 (1 million installs), Football Franchise (NFL) and Baseball General Manager.

More details: <http://fromthebenchgames.com/>

Enjoystr, a secure chat application

The project was done for Herotec German company. It is not in Google Play anymore. I created the Android client.

<http://www.droiders.com/es/tag/enjoystr-es/>

Nativo - Venue AR Geolocalization

Nativo is a prototype app made for Android & Google Glass where i had the chance to work on. It displays near venues using augmented reality and geolocation.

Corleone, Java annotation processor

Corleone is a java AP made to concatenate background tasks through a simple syntax. It is a personal project. Find it at <https://github.com/JorgeCastilloPrz/Corleone>

More github projects

EasyMVP, Dagger2Scopes, ExpandablePanel, PagedHeadListView are some of my personal github projects that you can find on my github profile:
<https://github.com/JorgeCastilloPrz>
